Andrew Brown 2011-10-24 Bound to play an ever increasing role in the driver-vehicle relationship, connectivity is becoming a basic consumer requirement when it comes to choosing a vehicle. Moving from the computer into the car, the ability to stay in touch, informed and entertained has reached yet a higher level of technology ubiquity. Featuring 20 SAE technical papers published in 2010 and 2011, Connectivity and the Mobility Industry addresses important aspects of one of the most cutting-edge topics in the industry today. Edited by Dr. Andrew Brown, Jr. 2010 SAE International President and Chief Technologist for Delphi Corporation, this book also includes three original articles on the subject, written by various experts: • What to

**Handbook of Bioenergy Crops** N. El Bassam 2010-02-03 Biomass currently accounts for about fifteen per cent of global primary energy consumption and is playing an increasingly important role in the face of climate change, energy and food security concerns. Handbook of Bioenergy Crops is a unique reference and guide, with extensive coverage of more than eighty of the main bioenergy crop species. For each it gives a brief description, outlines the ecological requirements, methods of propagation, crop management, rotation and production, harvesting, handling and storage, processing and utilization, then finishes with selected references. This is accompanied by detailed guides to biomass accumulation,

harvesting, transportation and storage, as well as conversion technologies for biofuels and an examination of the environmental impact and economic and social dimensions, including prospects for renewable energy. This is an indispensable resource for all those involved in biomass production, utilization and research.

*Integrated Design and Manufacture Using Fibre-Reinforced Polymeric Composites* M J Owen

2000-06-19 This very practical book is intended to show how composites are increasingly being used in real-world applications in areas where the primary material choice in the past would have been exclusively metals-based. A series of in-depth case studies examines the design processes involved in putting together aircraft fuselages, Formula 1 cars, Transit van roofs, infrastructure systems for water treatment and storage and many other novel applications for FRCs. It shows how an awareness of engineering properties needs to be built into the design

process at an early stage. It is essential for professionals in, and newcomers to, the FRP industry; executives in engineering and manufacturing who are considering using FRPs in place of more traditional materials; students in materials science and engineering.
