Artificial Intelligence Applications in Electrical Transmission and Distribution Systems Protection Almoataz Y. Abdelaziz

2021-10-21 Artificial intelligence (AI) can successfully help in solving real-world problems in power transmission and distribution systems because AI-based schemes are fast, adaptive, and robust and are applicable without any knowledge of the system parameters. This book considers the application of AI methods for the protection of different types and topologies of transmission and distribution lines. It explains the latest pattern-recognition-based methods as applicable to detection, classification, and location of a fault in the transmission and distribution lines, and to manage smart power systems including all the pertinent aspects. FEATURES Provides essential insight on uses of different AI techniques for pattern recognition,

classification, prediction, and estimation, exclusive to power system protection issues Presents an introduction to enhanced electricity system analysis using decision-making tools Covers AI applications in different protective relaying functions Discusses issues and challenges in the protection of transmission and distribution systems Includes a dedicated chapter on case studies and applications This book is aimed at graduate students, researchers, and professionals in electrical power system protection, stability, and smart grids.

Electrical Power System Fault Analysis

Package A. B. M. Nasiruzzaman 2010-06 This book presents a nice Graphical User Interface based approach for solving electrical power system fault analysis problems. MATLAB, flagship software for scientific and engineering computation, is used for this purpose. Examples and problems from various widely used textbooks of power system are taken as reference so that results can be compared. This takes into account the fresh students having no idea about the course and can alone be used as a textbook. Help file is also provided with every module of the software keeping in mind that the software can be used as alternative to any textbook. It has been prepared for anyone who has little or no exposure to MATLAB. The programs were written in MATLAB 6 and are made compatible with most releases of MATLAB. The purpose of this book is to develop a fundamental idea about the power system fault analysis among the undergrads so that they can develop their own skills and aptitudes for solving real world power engineering fault analysis problems. Undergraduate students in electrical engineering having background of electrical machines and matrix algebra, who are interested in power system analysis, are encouraged to take a look.
