Thinking Sociolinguistically Paul McPherron 2018-12-06 This is a practical guide to planning, conducting and presenting a sociolinguistic research project. Written in an accessible and engaging style, the book begins with a brief review of what sociolinguists study and how they study it, before guiding students step-by-step through the research process. It presents a range of qualitative and quantitative data collection and analysis methods, including surveys, interviews and corpora, supported by examples from both published researchers and

student projects. Drawing on the experiences of their own students, the authors provide supportive guidance on common areas of difficulty, such as framing questions, selecting participants and interpreting data. This is an essential companion for budding sociolinguistic researchers with a desire to understand the linguistic landscapes around them and communicate their findings to others.

Critical Sociolinguistic Research Methods

Monica Heller 2024-05-27 Critical

Sociolinguistic Research Methods is a guide to conducting concrete ethnographic and discourse analytic research projects, written by top scholars for students and researchers in social science fields. Adopting a critical perspective focusing on the role of language in the construction of social difference and social inequality, the authors walk the reader through

five key moments in the life of a research project: composing research questions, designing the project, doing fieldwork, performing data analysis and writing academic texts or otherwise engaging in conversation with different types of social actors about the project. These moments are illustrated by colour-coded examples from the authors' experiences that help researchers and students follow the sequential stages of a project. Now in its second edition, this popular and original text has been revised and updated to reflect the latest developments in this field, including expanded sections on the centrality of the ethnographic gaze for the understanding of social processes, and on experiences of diversification in the communication of research results. Through the adoption of multimodal genres, authors share recent experiences of research presentations addressed to non-academic audiences, such as installations and photography, and interactive maps. Clear and highly applicable, with a

detailed workbook full of practical tips and examples, this book is a great resource for graduate-level qualitative methods courses in linguistics and anthropology, as well as methods courses in the humanities and social sciences that focus on the role of language in research. It is a timely text for investigating language issues that matter and have consequences for people's lives.
