Mastering Intrusion Detection for Cybersecurity Akashdeep Bhardwaj 2025-08-20 In a digital age marked by increasingly sophisticated cyber threats, *Mastering Intrusion Detection for Cybersecurity* offers a vital, up-to-date guide for researchers, cybersecurity professionals, and advanced learners seeking to enhance their defense strategies. This practical volume presents a comprehensive overview of modern intrusion detection systems (IDS), combining theoretical foundations with actionable insights into emerging technologies and real-world applications. Covering a wide range of intrusion detection techniques, including machine learning, behavior analytics, anomaly detection, and human-centered approaches, this book explores the evolving challenges and solutions in network security, cloud environments, industrial systems, and intelligent infrastructure. Readers will benefit from the hands-on perspective and interdisciplinary approach that bridges the gap between academic innovation and practical deployment. With a focus on enhancing threat detection accuracy, improving response time, and adapting to dynamic attack surfaces, this book serves as a valuable resource for strengthening digital resilience in today's complex cyber landscape.

**Letters From The Open Road (Vol. 1)** Sidharth Sharotri 2023-01-05 From the completely juvenile yet brilliant mind of Sidharth Sharotri comes a compilation of his 'serious automobile journalism' work, which consisted of him driving posh cars and making up stories around them for newspapers. These highly technical (read: not at all technical) articles first appeared in a weekly motoring page called *Honk in Deccan Chronicle* and *Asian Age* between 2013 and 2015, which this author was exclusively entrusted with. *Letters from the Open Road* does exactly what his newspaper articles did - make the reader giggle a little bit while making them wonder if they should chase their own childhood dreams.

**Advances in Intelligent Networking and Collaborative Systems**

Leonard Barolli 2024-09-14 This book provides latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to intelligent social networks and collaborative systems, intelligent networking systems, mobile collaborative systems and secure intelligent cloud systems as well as reveals synergies among various paradigms in such a multi-disciplinary field of intelligent collaborative systems. With the fast development of the Internet, there is a shift from the traditional sharing of information and applications as the main purpose of the Web to an emergent paradigm, which locates people at the very center of networks and exploits the value of people's connections, relations and collaboration. Social networks are also playing a major role in the

dynamics and structure of intelligent Web-based networking and collaborative systems. Virtual campuses, virtual communities and organizations strongly leverage intelligent networking and collaborative systems by a great variety of formal and informal electronic relations, such as business-to-business, peer-to-peer and many types of online collaborative learning interactions, including the emerging e-learning systems. This has resulted in entangled systems that need to be managed efficiently and in an autonomous way. In addition, latest and powerful technologies based on grid and wireless infrastructure as well as cloud computing are currently enhancing collaborative and networking applications a great deal but also facing new issues and challenges. The principal purpose of the research and development community is to stimulate research that will lead to the creation of responsive environments for networking and, at longer-term, the development of adaptive, secure, mobile and intuitive intelligent systems for collaborative work and learning.
