Tour of the Electromagnetic Spectrum

Ginger Butcher 2016

Light, Colour And The Eye Gr. 4-6 Doug

Sylvester 1995-01-01 These illuminating topics include "Light and Color", where students are introduced to luminous and illuminated objects, transparent, translucent and opaque objects, and investigate light's property of travelling in straight lines. Refraction, bending light and the use of prisms to "break" white light into the colors of the rainbow are also explored. Section 2 focuses on the "Human Eye", where students learn about the parts of the human eye, experiment with pupil size, and find their blind spot. Included are notes suitable for hand-outs or on a projection system that convey much of

the knowledge-based material. This Physical Science lesson provides a teacher and student section with a variety of reading passages, activities, crossword, word search, exam and answer key to create a well-rounded lesson plan.

short stories, tables and figures complete the book

Energy Gr. 5-8 George Graybill 2007-09-01
Unlock the mysteries of energy. Our resource demonstrates how energy is more than "the ability to do work". Learn about all the different kinds of energy. Dissect mechanical energy by identifying the different points on a roller coaster as using kinetic or potential energy. Find out how an object's thermal energy is calculated from its kinetic energy. Understand that amplitude, wavelength and frequency are all part of sound waves, and use these terms to correctly label one. Take a look at the electromagnetic spectrum as you see all the colors of light energy. Explore other forms of potential energy from nonrenewable and renewable sources. Finally, measure the speed of sound in a group experiment. Aligned to the Next Generation Science Standards and written to Bloom's Taxonomy and STEAM initiatives, additional hands-on experiments, crossword,

word search, comprehension quiz and answer key are also included.

The Electromagnetic Spectrum Franklyn Mansfield Branley 1979 An explanation of the nature of the electromagnetic spectrum, the scientific investigations that led to our understanding of it, and its role as a tool of science.

Invisible Universe Stephen M. Pompea 2002

The 5 class sessions, of 45-60 minutes each, deepen student understanding of the electromagnetic spectrum, enabling students to detect and consider wavelengths other than visible light. Activities feature energy stations, including infrared (TV remote); microwave (pager); ultraviolet (black light) and other devices. Students come up with their own tests to see what blocks each wavelength, and what does not. They learn how these other wavelengths can be used to "see" things we cannot see with our eyes.
